Reviewer's report

Title: Cognitive performance in relapsing remitting multiple sclerosis: a longitudinal study in daily practice using a brief computerized cognitive battery

Version: 9 Date: 23 May 2011

Reviewer: Richard Benedict

Reviewer's report:

here are my final comments, pending which the manuscript can be accepted:

In the Discussion, the section on explaining the poor sensitivity of CDR memory measures, authors should note that CDR has no measure of visual recall which is the most sensitive memory test in the MACFIMS battery

In the Conclusion, the authors must qualify the statement "The CDR System measures showed good psychometric properties and were ....." by noting that most of the components but not all, or the non-memory components.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
