Reviewer’s report

Title: Clinical and molecular features of an infant patient affected by Leigh Disease associated to m.14459G>A mitochondrial DNA mutation: a case report.

Version: 2 Date: 3 July 2011

Reviewer: Eppie Yiu

Reviewer’s report:

This case report has been revised and the speculative nature of the effect of the cytochrome b variant on the clinical phenotype made clearer.

Minor essential revisions:
I note that the manuscript has received some English editing however there are still a few grammatical and spelling errors that require attention. E.g. drug doses in mg/day (not die).

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
