Reviewer's report

Title: Clinical correlates of grey matter pathology in multiple sclerosis.

Version: 2 Date: 14 November 2011

Reviewer: Jeroen Geurts

Reviewer's report:

The authors have dealt with most of the issues suggested by the referees. At least part of the answers they came up with did not correspond to a question that was asked, even after considering the switch of reviewer responses (ref 1 = ref 2), but the manuscript has improved overall and I think it may be acceptable for publication in the theme issue now.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
