Reviewer's report

Title: Transdermal rotigotine for the perioperative management of restless legs syndrome

Version: 2 Date: 1 July 2012

Reviewer: Santiago Perez-Lloret

Reviewer's report:

I agree with all changes.

I'm still not convinced with the paper's conclusions. If the objective was to assess feasibility, it cannot be concluded that "Rotigotine transdermal patch may be a suitable alternative in perioperative situations" (Abstract).

It would be also necessary to add a similar conclusion to the discussion section.

Level of interest: An article of limited interest
