Reviewer's report

**Title:** Prognostic Value of Cortically Induced Motor Evoked Activity by TMS in Chronic Stroke: Caveats from a Revealing Single Clinical Case

**Version:** 2  **Date:** 2 April 2012

**Reviewer:** Heidi Schambra

**Reviewer's report:**

The authors have addressed my concerns adequately and would recommend this manuscript for publication.

One Discretionary Revision: in your response letter, last point: the use of the word 'affectation' ("However, results from the frequency reveal a mild affectation of the affected (right) hand") is incorrect -- but it appears you fixed it in the actual manuscript on pg 19. I will leave it to the authors/editors to ensure this latter version is published.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
