Reviewer’s report

Title: Japanese Encephalitis Accompanied by Cerebral Venous Sinus Thrombosis: A Case Report

Version: 4 Date: 18 March 2012

Reviewer: Jonathan M Coutinho

Reviewer’s report:

Just a view issues remaining:

1. In my opinion the filling defect in the right transverse sinus is a Arachnoid granulation. I would suggest to settle this matter by asking the opinion of an experienced neuroradiologist.

2. Ok

3. Replace the part “usually associated” with “often associated”. This is important because many lateral sinus thrombosis cases are not associated with an infection, especially in developed countries.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
