Title: Japanese Encephalitis Accompanied by Cerebral Venous Sinus Thrombosis: A Case Report

Version: 4 Date: 12 March 2012

Reviewer: Mohammad Wasay

Reviewer's report:

Title: CVST associated with Epidemic encephalitis type B: case report
Reviewer's comments:
Authors have not responded to our previous comments on how presence of JE-specific IgM antibodies was established. Report only describes that it was weakly positive and then it became positive.
Add this information:
What methodology was used to detect antibodies? Was it a qualitative or quantitative test? If quantitative please provide titers. What kit (brand, manufacturer) was used to test antibodies? What is meant by weakly positive versus positive?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
