Reviewer’s report

Title: A giant calcification and ossification of the transverse sinus and neighboring dura mimicking meningioma

Version: 1 Date: 22 September 2013

Reviewer: Jong Hee Chang

Reviewer’s report:

The authors reported a very rare case of giant physiologic ossification and calcification of the transverse sinus and adjacent dura mimicking a calcified meningioma. It is well written and illustrated, and educational to some clinicians in their fields.

It does not need a major revision, but it needs

<Minor essential revisions>

1. The authors should decrease the number of figures. For example, Figure 1 and 2 can be merged, and the number of postoperative images of Figure 5 can be decreased to 2-3 images.

2. English revision by native speaker is necessary.

Thanks.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
