Reviewer's report

Title: Prevalence of cutaneous adverse events associated with long-term disease-modifying therapy and their impact on health-related quality of life in patients with multiple sclerosis: a cross-sectional study

Version: 1 Date: 18 September 2013

Reviewer: Markus Kipp

Reviewer's report:

In this study, the authors describe the occurrence of cutaneous side effects in MS patients treated with different disease-modifying therapies. This study is well performed, written in excellent English and the results are presented in a logical and comprehensive manner. Their results are nicely discussed and limitations of the study and outcome critically highlighted.
I suggest publication.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
