Reviewer's report

Title: Multiple cavernous hemangiomas of the skull with dural tail sign: A case report and literature review

Version: 3 Date: 4 September 2013

Reviewer: L Gerard Toussaint III

Reviewer's report:

I have reviewed, once again, the submission entitled "Multiple cavernous hemangiomas of the skull with dural tail sign: A case report and literature review."

The English usage has improved.

The report reads clearly, and the review of the literature seems reasonable.

My one remaining concern is that this report is quite specific, repeats some information from prior reports, and adds only one small piece of information to the management of extra-axial cranial tumors:

After reading this, I will keep hemangioma in my differential diagnosis of lesions involving the skull and inducing a dural tail sign.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I have no competing interests that affect my ability to review this submission.
