Reviewer's report

**Title:** Encephalopathic Susac's Syndrome associated with livedo racemosa in a young woman before the completion of family planning

**Version:** 1  **Date:** 8 October 2013

**Reviewer:** Thomas F Scott

**Reviewer's report:**

Major compulsory changes: there are eleven authors, some contributing only through interpretation of tests and suggested therapies. The number of authors should be less.

Minor essential: The case bears so little resemblance to MS the authors can and should omit this as a serious consideration. Other vasculopathies would be more appropriately considered.

Discretionary: a summary of previous MRI descriptions and placement of this case in that context would be welcome.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare I have no competing interests
