Reviewer's report

Title: Neuropsychopathological comorbidities in learning disorders

Version: 2 Date: 7 November 2013

Reviewer: Euthymia Vargiami

Reviewer's report:

Dear authors,

I think that your article is interesting, cause its cover a huge field, called learning disabilities. You do a good job on diving the subgroups with more interest. The difference between your sample among males and females, is because LS are presenting in males with higher rate. I think that your results suggest future directions for research, to better define the differences between SLD and LD NOS, in order to improve specific interventions that should be able to offer simultaneous management of the disorder itself and its co-morbidities to reduce the long range consequences.

I strongly suggest this article for publication without revision.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
