Reviewer's report

**Title:** Stroke knowledge among diabetics: Influence of age, gender, education, and migration status

**Version:** 2  **Date:** 29 September 2013

**Reviewer:** Simon Jung

**Reviewer's report:**

This is a well written article that analysis the factors that contribute to stroke knowledge among 218 diabetic patients.

The authors present interesting data that suggest that information strategies should be adapted.

Major:
I have only two major points:
1. Why are 3 patients included who do not have DM II?
2. Where all the performed statistics predefined?

Minor:
The discussion could/should be shortened a bit.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
