Reviewer's report

Title: Stroke knowledge among diabetics: A cross-sectional study on the influence of age, gender, education, and migration status

Version: 3 Date: 14 November 2013

Reviewer: Pedro T Cougo-Pinto

Reviewer's report:

The manuscript has greatly improved. Congratulations. There are minor -- however, very important -- issues that should be addressed.

Major compulsory revisions

Results section

Under "Medical and sociodemographic characteristics of study population", regarding the number of persons in households, and under "Stroke knowledge", page 9, paragraph 2, regarding the number of stroke symptoms reported by patients: these are ordinal variables, not continuous, and would better be expressed in median (interquartile range), and should be tested with Wilcoxon test rather than with t-test. Please verify this also for all tables and statistical analysis.

Tables 1 2 and 3: please provide the actual value of all P values, and not if they are non-significant or <0.05

Table 4: please provide the P value for each variable in the model.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
