Reviewer’s report

Title: Extensive myelitis revealing anti-NMDA receptor encephalitis

Version: 1 Date: 11 November 2013

Reviewer: Thomas F Scott

Reviewer’s report:

- Minor Essential Revisions

The author should adjust some language. We usually discuss MRI imaging of ventriculitis in terms of enhancement of the ependymal and surrounding regions, as the author does in fact in the discussion, but not as "ventricular enhancement", which seems to imply increased signal in csf spaces. Also, it is unusual to refer to follow up MRIs as "control brain" imaging.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
