Reviewer’s report

Title: West syndrome followed by juvenile myoclonic epilepsy: a coincidental occurrence?

Version: 2 Date: 9 February 2013

Reviewer: Athanasios Covaris

Reviewer’s report:

Dear Author

I do continue to have my reservation calling the epileptic phenomenon appearing at puberty as the syndrome Juvenile myoclonic epilepsy.

A minor comment regarding idiopathic infantile spasms: these children prior to spasms are developmentally completely normal and continue to be after an early and complete clinical and EEG response.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
