Reviewer's report

Title: The University of Texas Houston Stroke Registry (UTHSR): Implementation of Enhanced Data Quality Assurance Procedures Improves Data Quality

Version: 2 Date: 21 April 2013

Reviewer: Ching-Lin Lin Hsieh

Reviewer's report:

I cannot find the authors address the critical issue: "Only 2.2% has been achieved, given the fact that the initial error rate (3.8%) was low. Thus, the utility of the enhanced QA is highly in doubt. The need for applying the enhanced QA is also in doubt. However, the authors have not addressed these issues."

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
