Reviewer’s report

Title: Prevalence, characteristics and correlates of a positive-dementia screen in patients on antiretroviral therapy in Bamenda, Cameroon

Version: 1 Date: 9 May 2013

Reviewer: Djordje Jevtovic

Reviewer’s report:

Authors need to explain th composition of HAART regimens, since "neuro-HAART" should contain AZT, ABC, NVP and/or LPV/r. THe relatively poor score achieved in neuro-cognitive assessment of patients described could be the repercussion of taking HAART regimens composed of drugs that poorly penetrates to CNS. I would suggest that kind of analyses should be added in results and discussion.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
