Reviewer's report

Title: Primary epstein-barr virus infection with polyradiculitis: a case report

Version: 2 Date: 30 May 2013

Reviewer: Steven Thijsen

Reviewer's report:

Authors present an interesting of a primary EBV Infection with a marked polyradiculitis with a favorable outcome and acyclovir treatment.

Minor Essential Revisions
Could the authors clarify whether the penicillin retreatment was empirical or was a streptococcus cultured

Could the authors clarify how other causes were excluded such as Borrelia, which tests were used.

Could the authors clarify why acyclovir was started en stopped

Level of interest: An article of importance in its field
