Title: Subarachnoid hemorrhage secondary to a ruptured middle cerebral aneurysm in a patient with osteogenesis imperfecta: A case report

Version: 2

Date: 7 March 2014

Reviewer: Vitaliano Francesco Muzii

Reviewer's report:

The Authors presented an interesting case of a ruptured middle intracranial aneurysm in a patient with osteogenesis imperfecta (OI). According to Authors, this is just the seventh case report of this unusual association. Overall, the article is well written, however some minor essential revisions are needed.

Minor Essential Revision
1) Line 57: correct “extraskeltal” into “extraskeletal”.
2) Line 81: delete “state”.
3) Line 84-85: substitute the second sentence with “which was in the Japanese female average”.
4) Line 120: change “at” into “of”.
5) The presence of an arachnoid cyst should be mentioned in the case description and briefly mentioned in the discussion. In fact, the presence of arachnoid cyst have been described in association with OI (1); in addition arachnoid cyst are also found in polycystic kidney disease, another heritable connective tissue disorder associated with intracranial aneurysms.
6) Line 91-92: the authors should clearly specify that they analyzed COL1A1 and COL1A2 genes.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
