Title: Memory impairment caused by cerebral hematoma in the left medial temporal lobe due to ruptured posterior cerebral artery aneurysm

Version: 3
Date: 30 January 2014

Reviewer: Michitaka Funayama

Reviewer’s report:

This manuscript entitled, “Memory impairment caused by cerebral hematoma in the left medial temporal lobe due to ruptured posterior cerebral artery aneurysm”, describes a rare case with pure amnestic syndrome following a dissecting aneurysm rupture of the distal portion of posterior cerebral artery. The paper needs to be strengthened somewhat and I hope the following comments are useful.

Minor essential revisions:
1. You may want to include for reference some previous reports regarding mild or no retrograde amnesia after lesion restricted to the left medial temporal lobe. The following articles might be of your help.

2. The order of the results of neuropsychological tests in Table 1 can be revised with listing three types of memory tests together, not separately. If possible, adding cutoff point or mean plus/minus deviation for each test would be informative for readers.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
