Title: Microarray analysis identifies a set of CXCR3 and CCR2 ligand chemokines as early IFNβ-responsive genes in peripheral blood lymphocytes: an implication for IFNβ-related adverse effects in multiple sclerosis

Version: 2 Date: 5 May 2006
Reviewer: Lyn Griffiths

Reviewer's report:

General
Yes - the revised manuscript answers all the concerns raised by this reviewer and I now accept that the article is suitable for publication.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision
