Reviewer's report

Title: Microarray analysis identifies a set of CXCR3 and CCR2 ligand chemokines as early IFNB-responsive genes in peripheral blood lymphocytes: an implication for IFNB-related adverse effects in multiple sclerosis

Version: 2 Date: 8 May 2006

Reviewer: Christopher Lock

Reviewer's report:

General
The authors have addressed the questions raised by the reviewers. I think that the article is suitable for publication in its current form.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:

I declare that I have no competing interests.
