Reviewer's report

Title: Relationship of depression, disability, and family caregiver attitudes with the quality of life of Kuwaiti patients with multiple sclerosis: a controlled study

Version: 1 Date: 13 August 2007

Reviewer: Francesco Patti

Reviewer's report:

The paper, in my evaluation, is suitable to be published. As minor points I suggest the authors to mitigate the negative sentence of disease modifying drugs in the first paragraph of the introduction and in the same paragraph I suggest to expand the definition of MS over the demyelinating disease.

Finally some references are lacking of data (year of publication)
