Reviewer's report

Title: Moyamoya Disease: A Clinical Spectrum Literature Review and Case series from a Tertiary care hospital in Pakistan.

Version: 1 Date: 28 October 2008

Reviewer: Peter Berlit

Reviewer's report:

This is an interesting case series of moyamoya disease from Pakistan. In some cases potential differential diagnoses like postpartum vasopathy and inflammatory angiopathy should be discussed in more detail. Which diagnostic procedures were used for the diagnosis (angiography or MRA?). It is unlikely that corticosteroids influence the outcome of the disease. What was the rationale to give steroids in the cases reported?

The manuscript needs language editing.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
