Reviewer's report

Title: Moyamoya Disease: A Clinical Spectrum Literature Review and Case series from a Tertiary care hospital in Pakistan.

Version: 2 Date: 12 February 2009

Reviewer: Edward Smith

Reviewer's report:

This revision has markedly improved the quality of the manuscript. Given the inherent (and noted) difficulties of longitudinal and centralized care in Pakistan, the authors are to be commended on their work. I would make only minor grammatical comments, such as the use of capital letters inappropriately (such as Cerebral Angiography) and the lack of a need to provide numerical data out to hundredths (for example, age of 16.57 years would easily be substituted by 16.6 years without compromising quality). Other than these minor points, I would accept this paper.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
