Reviewer’s report

Title: A prevalence survey of every-day activities in pregnancy

Version: 1 Date: 7 April 2010

Reviewer: Nathan Fox

Reviewer’s report:

The authors present the results of a survey regarding various activities during pregnancy.

Major Revisions:

- In table 2, do the authors take into account patients who completed the survey more than once? If not, they should also present the data from first responses only.

- My colleagues and I published a similar survey of activity during the third trimester (Fox NS et al J Womens Health Nov 2008). The authors should probably briefly comment on the similarities and differences between their responses and ours, as we studied different populations

Discretionary Revisions:

- Would the authors care to comment on the seemingly high rate of alcohol consumption among their patients? Do they believe this represents an occasional half glass of wine, or a high prevalence of significant alcohol consumption in their population?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
