Title: Reducing errors in health care: cost-effectiveness of multidisciplinary team training in obstetric emergencies: the TOSTI-trial

Version: 2 Date: 12 August 2010

Reviewer: Justus Hofmeyr

Reviewer's report:

Comments on revision in response to review.

This is a worthwhile study. The authors have addressed most of the suggestions raised in the first review.

I would suggest two discretionary revisions:

1. To include 'dummy tables' in the protocol. This is a very useful way of being able to demonstrate that the final publication of results is consistent with the original research plan.

2. To indicate more specifically that the protocol follows the CONSORT guidelines.
