Reviewer's report

Title: Antenatal counseling in maternal and newborn care: use of job aids to improve health worker performance and maternal understanding in Benin

Version: 2 Date: 27 July 2010

Reviewer: Joanna Stewart

Reviewer's report:

The authors have appropriately restricted the reporting of results to analyses corrected for the sampling design. However the uncorrected methods still remain in the methods section. They should be removeds from there too.

Minor - Remove the description of analyses unadjusted for the design from the statistical methods section

Maternal Knowledge 3rd sentence, 'would' should be 'who'

Discretionary - Results, 1st paragraph. There is no need to remove the percentages describing the groups unless the authors wish to

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
