Reviewer's report

Title: No association between polymorphisms/haplotypes of the vascular endothelial growth factor gene and preeclampsia.

Version: 1 Date: 1 February 2011

Reviewer: Pasquapina Ciarmela

Reviewer's report:

In the present paper, the authors studied the association between polymorphisms/haplotypes of VEGF and preeclampsia in the Mexican population.

The study is well designed and the methods are appropriate, but some corrections of the manuscript are needed.

The authors studied 4 different VEGF variants, however one of the most studied is 936 C/T, please analyze it or explain in the manuscript why they did not study it.

The manuscript should be revised typographically and the references has to be corrected (for example note that ref 20 and 21 correspond to ref 13 and 12!).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
