Reviewer's report

Title: Predictors of extra care among magnesium sulphate treated eclamptic patients at Muhimbili National Hospital, Tanzania.

Version: 2 Date: 13 April 2011

Reviewer: Justus Hofmeyr

Reviewer's report:

The authors have attended to the suggestions of the reviewers. They have appropriately acknowledged limitations of the study, such as missing data, and the fact that women referred from other hospitals may be selected for their particularly high risks, thus accounting for poorer outcomes than those admitted directly to the central hospital.

The English is much improved, though still some minor editing needed.

The presentation of data in the tables may benefit from further review by a statistician.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
