Reviewer’s report

Title: A New Fetal RHD Genotyping Test: Costs and benefits of mass testing to target antenatal anti-D prophylaxis in England and Wales.

Version: 1 Date: 11 November 2010

Reviewer: Lee Shulman

Reviewer’s report:

This is a well written and easy to follow overview of the economic feasibility of NIPD for Rh-D in routine obstetrical management. The authors present cogent arguments and detailed analysis for their positions, and include potential shortcomings and limitations.

This is an important article that provides important information to our readers concerning new technologies that are likely to change our approach to prenatal diagnosis and obstetrical management. The economic analysis is easy-to-follow and presents an important, and sometimes overlooked, aspect of the incorporation of new technologies into clinical care.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
