Reviewer’s report

Title: Management of (Pre-) Eclampsia In Afghanistan

Version: 1 Date: 15 August 2013

Reviewer: Luis L Cabero

Reviewer’s report:

In my opinion is a good paper on a critical matter that can be responsible of an important number of maternal deaths due to PE/E.

Unfortunately, the picture from the centers that are not test due the political and unsafe reasons, could be much more important than the picture coming from the studied centers. However, we think that probably the results can be worse.

The conclusions are very realistic and can be the basis for to improve the health local policy (including the human resources and his training)

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
