Reviewer's report

Title: Prevalence and outcomes of breast milk expressing in women with healthy term infants: a review of the literature

Version: 1 Date: 1 August 2013

Reviewer: Jacqueline Kent

Reviewer's report:

The authors state, “The aim of this paper is to systematically explore the literature related to breast milk expressing by women who have healthy term infants, including the prevalence of breast milk expressing, and the reported reasons for, and outcomes related to, expressing.” This aim is valid, however the authors do not remain objective in their interpretation of the literature. The paper should be modified accordingly before acceptance.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
