Manuscript Title: Maternal postpartum morbidity in Marrakech: What women feel, what doctors diagnose?

Reviewer: Sahar Hassan

Reviewer comments (second review)

Authors have responded to all major comments. I still have one major revision that I would trust the authors and the editor to consider before publication.

Page 6: under the subtitle Insert table 1: the last sentence:

Author wrote as a finding under results: ‘Near-miss cases represented 6% of the hospitals’s deliveries in our study’.

I do not see this findings coming directly or indirectly from your results and tables that you presented in the paper. Furthermore, calculating near miss cases is a complex issue and follows variety of criteria. Since the authors did not present the data that shows near miss cases clearly in the paper and they did not explain what criteria they exactly used and how they come up with this rate, this findings is not part of this paper and should be deleted.

Few minor essential revisions are still required: Language structural and spelling errors and typos can still be easily found in the manuscript and need to be corrected.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
