Reviewer's report

Title: Factors associated with success of VBAC, a case control study in three teaching Hospitals, Ethiopia

Version: 2 Date: 27 August 2012

Reviewer: Tegbar Yigzaw

Reviewer's report:

Major Compulsory Revisions
1. Editorial revision is needed.
2. The authors have not addressed the comment I made regarding sample size calculation. If they cannot defend it, the best option is to acknowledge this as a limitation and take that into account in drawing conclusions.
3. The presentation of results would be clearer if authors describe the exposure variables using a table.
4. The results section does not provide odds ratios and P-values in the text. Selected odds ratios and confidence intervals should be presented in the textual description of the results. Then readers can refer to the table for more information.
5. I acknowledge that the authors have revised the discussion. However, interpretation and comparison of key findings in the context of other studies has not been done satisfactorily.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
