Reviewer’s report

Title: Prenatal diagnosis of fetal cardiac malposition caused by unilateral lung agenesis

Version: 2 Date: 24 October 2012

Reviewer: Simmi Ratan

Reviewer’s report:

The authors need to support their statement that the absence of ipsilateral pulmonary artery and not the vein should be considered as the gold standard for labelling the diagnosis of pulmonary agenesis.

They should provide objective percent of cardiac anomalies and their nature in association with unilateral pulmonary agenesis

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
