Reviewer's report

Title: Fear for external cephalic version and depression: predictors of successful external cephalic version for breech presentation at term?

Version: 4 Date: 21 October 2013

Reviewer: Jorge Burgos

Reviewer's report:

The authors have replied fully to the suggestions and have introduced changes that have improved the quality of work. Study limitations are specific to the design and are well described in the discussion. The findings are consistent with the results obtained. Only one suggestion: I suggest remove the last sentence in conclusions: "This might be modified by initiating ECV earlier in pregnancy". This is not a conclusion of their investigation and the commentary in the discussion is enough. My congratulations to the authors.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
