Reviewer’s report

Title: The Effect of Social Support around Pregnancy on Postpartum Depression among Canadian Teen Mothers and Adult Mothers in the Maternity Experiences Survey

Version: 3
Date: 25 April 2014

Reviewer: Simone Vigod

Reviewer’s report:

This revision is much improved.

Minor essential revisions:

1. Can the authors provide a reference and rationale for using an EPDS cut-off score of >13 for the outcome (instead of the standard > 12)?

Minor discretionary comments to address:

1. Although the interaction term was not significant, I still think it would be interesting to see the stratified predictive models, to understand whether any other factors were different between the groups. The authors have these as they were in the previous version.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
