Reviewer's report

Title: Quality of Prenatal Care Questionnaire: Instrument development and testing

Version: 2 Date: 20 March 2014

Reviewer: Susanne Grylka-Baeschlin

Reviewer's report:

General comments:
The authors improved the manuscript and respected most of the propositions. Background, method and results are restructured and titles as well as subtitles are consistent now.

The authors restructured the background chapter in a meaningful way. Redundancy was removed, purpose and aim at the end of the chapter and the study design is placed in the method section. Titles and subtitles in this chapter and in the whole manuscript are consistent now.

The ethical approval was replaced to the method chapter. The method and result chapter is separated in two chapters. The chapters are logically structured.

There is still a lot of textbook knowledge in the methods chapter; however, the authors respected to rephrase the citations. The classification of Cronbach’s Alpha is consistent now.

Discretionary revision:
Figure 1: the author state that they have corrected the last line in the figure. It may be a minor detail; however, the last line of the box for phase 4 is still placed too much on the right side. There is no adjustment visible.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
