Reviewer's report

Title: Eating for 1, Healthy and Active for 2; feasibility of delivering compact training to equip practising Midwives to tackle nutrition, physical activity and weight management concerns amongst pregnant women.

Version: 1 Date: 4 November 2013

Reviewer: Dolly Bondarianzadeh

Reviewer's report:

The point is that the paper reports the results of quantitative analysis of pre and post intervention data for 32 midwives. This sample size might have been enough for a qualitative study, but it is definitely not enough for a descriptive/comparison study that aims to indicate the results of an educational/training intervention.
