Reviewer’s report

Title: Obesity and pregnancy: a transversal study from a low-risk maternity

Version: 2 Date: 16 June 2014

Reviewer: Gustavo A Neppelenbroek

Reviewer’s report:

Opinions on the following points:
1. The question proposed by the authors is clear and well defined.
2. Data are objective. However, I would suggest the inclusion of the type of incision in obese, middle or pfanniestiel, compared with the control group incision. Another important factor would be the amount of cesarean deliveries that were made because the only condition of fetus with over 4000 grams in the two groups.
3. The manuscript is relevant, especially when proposing change in protocols with a significant number of samples.
4. The discussion and conclusions are consistent with the data presented.
5. Limitations of the work are clearly stated and not interfere with the final result.
6. Authors acknowledge the originality of the work performed.
7. The title and abstract are consistent with the text and answer what is proposed.
8. The writing is acceptable. Just some suggestions for inclusion of data (if possible) to enrich the work were previously proposed (discretionary revisions).

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
