Reviewer’s report

Title: Medical issues in antenatal and perinatal periods among pregnant adolescents and young adults in Taiwan: a 10-year nationwide study

Version: 2 Date: 15 May 2014

Reviewer: Paula Vargas Innocenti

Reviewer’s report:

1. no major compulsory revisions
2. Minor revisions:
Make clear in the title that is a comparison of this 2 groups (adolescents and young group), that makes it more interesting.
in methods you describe that the data was from 2202 to 2008 but in the results the data is from 2002 to 2011.
in the covariates why you think that physician age and gender would interfere in the analysis, do women decide which doctor will attend them?
is there much differences among the different hospitals and regions that you have to categorize them.
in the results it came to my attention the very low preterm delivery in this young adult group, compare with the literature, what is the percentage of preterm delivery in your country? can you add that data.
the last sentence of the conclusions: "This finding suggests that suggests that proactive efforts to prevent adolescent pregnancies and reduce their adverse consequences in antenatal and perinatal periods” must be corrected.

Congratulations on the effort, interesting article.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
