Reviewer's report

Title: The (cost) effectiveness of an online intervention for pregnant women with affective symptoms: protocol of a randomised controlled trial

Version: 4  Date: 26 June 2014

Reviewer: Thinh Nguyen

Reviewer's report:

I think the authors should avoid using the term "affect dysregulation" as this is often used to describe a disruption in a core neuropsychological substrate (i.e. affect regulation) as well as the emotional lability associated with personality disorders.

It is best to be descriptive, that is "depressive and anxiety symptoms/disorders".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
