Reviewer’s report

Title: Anti-diabetic Drug Utilization of Pregnant Diabetic Women in US Managed Care

Version: 1 Date: 10 June 2013

Reviewer: Anita Banerjee

Reviewer’s report:

Major compulsory revisions

The subject is of interest however more clinical evidence and information is required.

1) The data lacks all women who may have had a miscarriage, stillbirth or termination of the pregnancy due to congenital abnormalities. Collecting this data may provide an understanding of anti-diabetic utilization and glycaemic control.

2) The data was collected over ten years and no correlation made with glycaemic control and co-morbidities of the women. Can this be correlated.

3) The data requires correlation with glycaemic control during pregnancy and outcome regarding birthweight, congenital defects and neonatal hypoglycaemia.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
