Reviewer's report

Title: Factors associated with non-use of antenatal iron and folic acid supplements among Pakistani women: A cross sectional household survey

Version: 2 Date: 15 May 2014

Reviewer: Prasanna Mithra

Reviewer's report:

1. Major Compulsory Revisions
Tables need revisions (excluding Table 1). Information related to each and every District may not be needed. Just the summarization would be sufficient as to rural and urban areas. Even age group could be reclassified into smaller number of groups. Also, the “p” value interpretation needs to be given in the results section. The descriptions involving numbers should be specific (i.e. expressions like about / around need to be avoided). Page no 7, line no 11, the word “randomly is written; which is not quite clear. Accordingly revisions to be done in the conclusions section.

2. Minor Essential Revisions
Grammatical corrections needed in background section.

3. Discretionary Revisions
Nil

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
