Reviewer’s report

Title: Postnatal growth outcomes and influence of maternal gestational weight gain: a prospective cohort study in rural Vietnam.

Version: 1 Date: 24 August 2014

Reviewer: olapeju esimai

Reviewer’s report:

Minor Essential Revisions

why use women in a double blind cluster randomised cluster trial, ? which group were used ,because this could influence the outcome of the study

what do you consider early pregnancy, the other factors were not well discussed. The authors discussed their findings but did not relate with other findings.

Some references are old.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
