Reviewer's report

Title: Obstetrician-Gynecologists' Knowledge of Sickle Cell Disease Screening and Management

Version: 3  Date: 11 July 2014

Reviewer: REGINA AGUIAR

Reviewer's report:

1. General comments

Sickle cell disease is still a disease with low visibility among health professionals and among the population as a whole. The article provides important contributions to the planning of teaching in undergraduate and postgraduate on the subject. Furthermore, it encourages reflection on the importance of identifying new differentiated methods of continuing education for some target diseases.

The authors has presented clearly the objectives of the study. The methods were appropriated and well described and the data are very interesting. The authors have discussed adequately and properly the results of the study.

Despite the loss in the sample of respondents, the results are very useful to assist in the construction of strategies that aim to improve the health of adults, especially women, with sickle cell disease.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
