Reviewer's report

Title: Recurrent secondary postpartum hemorrhages due to placental site vessel subinvolution and local uterine tissue coagulopathy

Version: 1 Date: 1 July 2013

Reviewer: LUMAAN SHEIKH

Reviewer's report:

1. Major Compulsory Revisions

   Author's comments on conservative measures such as the role of uterine artery embolization in such cases based on the evidence available in literature is required.

   What "targeted therapy" is the author recommending for vessel subinvolution?

   Conclusion as to what is recommended by the authors is unclear.

   Role of uterine artery pseudoneurysm as one of the causes of severe secondary PPH needs to be elaborated further.

2. Minor Essential Revision

   In the discussion part, detailed description of routine management of PPH has unnecessary and irrelevant.

Level of interest: An article whose findings are important to those with closely related research interests

Statistical review: No, the manuscript does not need to be seen by a statistician.
