Reviewer’s report

Title: Sero-positivity rate of rubella and associated factors among pregnant women attending antenatal care in Mwanza, Tanzania

Version: 4 Date: 28 January 2014

Reviewer: Ching-Chiang Lin

Reviewer’s report:

Discretionary Revisions

Second paragraph of Results, the risk of contacting rubella increases by 12% per year (table 2), and the sero-positive rate increases by 1.6% each year (Figure 1). I recommend to describe these results separately, so the reader will not be confused.

I suggest to change the word "sero-prevalence" to seropositivity rate".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
